Calibrate crop growth
Estimate shared crop parameters
Evaluate development and growth
Calibrate crop water use
Fit irrigation-treatment responses
Retrospectively test crop water use
Simulate continuous regional rotations
Carry soil water across wheat, maize and fallows
Compare crop responses at five irrigation levels
Allocate irrigation spatially
Compare uniform and targeted allocation
Hold the regional water budget constant
Selection: 1997–2013
Select annual quotas
Compare storage–rainfall and rainfall-only
Match monitoring availability
Selection: 2003–2013
Evaluate management outcomes: 2014–2025
Rotation grain · irrigation · ET · drainage · spatial gains and losses
